

EXPANSION MODULE

EST 482

APPLICATION

- EST 482 is an expansion module with 8 universal inputs that can be used both in remote communication (through the Modbus/RTU protocol) with the YLC 7xx/880 and ZBC 862 control units and with the EHC 602 network manager.
- NOTE: EST 482 maintains backward compatibility with CST 800, so that in older systems created with YLC 7xx/880 or ZBC 862 an old CST 800 can be replaced with an EST 482 without making any changes to the application
